

Unique Alternative to Injection Molded Board Racks

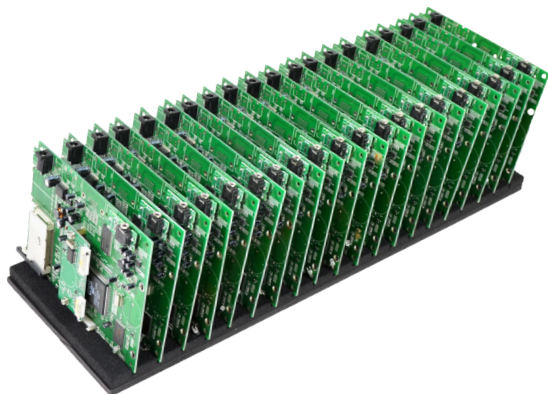

CCI's Safe Rack provides cushioned ESD protection on a rigid hardboard backer.

CCI's new board handling "Safe Rack" allows users to place multiple sizes and shapes of boards in one easy-to-use ESD safe product. The Safe Rack makes softer contact with boards compared to injection molded products, and is best suited for small to medium sized boards. This foam can be made in either permanently dissipative or permanently conductive.

- Safe Rack can hold irregularly shaped boards, even round or curved boards.
- No tooling is required.
- Permanent static dissipative surface.
- Cost savings versus injection molded racks.
- Ideal for memory boards and LED boards.

CCI Stock Part Number	Size	Number of Slots	Spacing	Depth	Slot Width
SR1806	18 X 6 X .65"	20	.875	.20	.0625

Rigid design holds up to 20 full-sized boards.

Cushioning foam protects sensitive leads on edges of boards.
